exact solutions of the heat equations in two dimensions are obtained for 1 a rotating disc insulated on the flat surfaces with an arbitrary heat input

distribution over a circular arc fixed in space along the periphery of the disc while the rest of the periphery not receiving heat at any given moment radiates into the ambient and 2 a truncated circular sector fan shaped insulated on four flat surfaces with an arbitrary heat input distribution over the truncated curved side and radiates into a controlled ambient over the other curved side the solution made possible the indirect measurement of point wise juncture condition at the interface of sliding contacts the actual mechanical model is only described schematically moreover the solutions are such forms as to be most suitable for matching the solutions at the interface given any juncture condition
